

7-12 MATH

In math classes we solve many story problems that talk about individuals from other cultures and backgrounds. We have the opportunity to see how other cultures have impacted the arts, architecture, and sciences as well as everyday life. These give us many opportunities to discuss and emphasize the importance of accepting individual differences we encounter when working with and meeting other people. These differences may be race, religion, financial, gender, sexual orientation, living conditions, home location (geographic region, town, and neighborhood), etc. The civil rights movement and Martin Luther King, Jr.'s efforts are commonly referenced in discussing multicultural education. We spend time discussing differences and tolerance during our character meetings as well.
